# Typesetting with Typst

From zero to beautiful documents

**JD, Edgar, AJ**

October 2026

# Agenda

1. Why Typst?
2. The Basics
3. Scripting

PART 1

# Why Typst?

A modern take on typesetting

1

# What is Typst?

- A **markup-based typesetting system**, like LaTeX but modern
- Compiles in **milliseconds**, with instant preview
- One language for both content *and* logic
- Free, open source, written in Rust

> **Tip**
> Try it in the browser at typst.app. No install needed.

# Typst vs. LaTeX

| | LaTeX | Typst |
|---|---|---|
| Bold text | `\textbf{hi}` | `*hi*` |
| Heading | `\section{Intro}` | `= Intro` |
| Compile time | seconds | milliseconds |
| Error messages | cryptic | readable |

PART 2

# The Basics

2

# Markup

SOURCE

```
= Heading
Some *bold* and _italic_ text,
plus `inline code`.

- A bullet list
+ A numbered list
```

OUTPUT

## Heading

Some **bold** and *italic* text, plus `inline code`.

- A bullet list

1. A numbered list

# Math

SOURCE

```
Inline: $a^2 + b^2 = c^2$

Display:
$ sum_(k=1)^n k = (n(n+1)) / 2 $
```

OUTPUT

Inline: $a^2 + b^2 = c^2$

Display:

$$\sum_{k=1}^{n} k = \frac{n(n+1)}{2}$$

# Two columns

**Markup mode** is the default: text, lists, headings.

- `*bold*`
- `_italic_`

**Code mode** starts with `#`: variables, functions, loops.

- `#let x = 1`
- `#for i in range(3) [..]`

> **Note**
> Everything in Typst is either markup, code, or math.

PART 3

# Scripting

3

# Functions and loops

SOURCE

```
#let greet(name) = [
  Hello, *#name*!
]
#greet("CS Org")

#for i in range(1, 4) [
  #i squared is #(i * i). \
]
```

OUTPUT

Hello, **CS Org**!

1 squared is 1.
2 squared is 4.
3 squared is 9.

# Set and show rules

SOURCE

```
#set text(fill: navy)
#show "Typst": set text(
  fill: red, weight: "bold")

Typst lets you restyle
everything with rules.
```

OUTPUT

**Typst** lets you restyle everything with rules.

**Watch out**

A `set` rule applies to everything *after* it in the same scope.

# Your turn!

# Exercise

**Exercise**

Make a one-page résumé in Typst with:

1. Your name as a heading
2. A bulleted list of skills
3. A `#let` function for job entries

# Questions?
